Understanding

We are seeing many changes in our understanding of the world and how we live in the world.

As we move toward more sustainable living, we are trying many innovative approaches to water supply, water reuse, habitat, and integrated water and energy planning.

These innovative approaches often involve bringing together new communities who haven't previously worked together, and need greater understanding of one another's perspectives and concerns, including

- Agencies
- Water providers
- Associations and nonprofit groups
- Private companies

Watercat works with mission-driven government agencies, associations, non-profits, and private entities in their efforts to incorporate innovative solutions to sustainable water management.

Watercat is committed to facilitating education and communication and building communities.

Services

Education & Outreach

- Planning programs for forums, conferences, and community building efforts around water
- Developing communication strategies and community action opportunities

Surveys & Analysis

- Reviewing and analyzing alternative technical and policy mechanisms
- Compiling databases and case studies
- Preparing "apples to apples" comparison reports for assessment of technology and policy alternatives
- Developing benchmark studies and model water management programs
- Developing analytical approaches and interactive decision support materials

Policy & Program Review

- Monitoring legislation and agency initiatives to develop science-based policy and support innovation
- Evaluating agency programs to identify project funding and resource leveraging opportunities

Expertise

Watercat Consulting LLC brings expertise in policy analysis, environmental management, civil engineering, geology, and water planning. We work with a team of experts in law, communications, and design to provide comprehensive support to clients in meeting their mission.

Cat Shrier, president and founder of Watercat Consulting, LLC, is a leading expert on technology, permitting and agency program development for:

- innovative water storage and management strategies
- integrated water-energy solutions, and
- water education programs.

Watercat is located on Capitol Hill. We do not provide lobbying services but maintain an understanding of current policy initiatives and legislation. **Please enquire** about use of Watercat meeting space and office facilities as a base for your meetings with Congress and federal agencies while you are in DC (please note: two cats reside in the office).
